***Allowable Subject Matter***

Claims 1-9 are allowed.

The following is an examiner's statement of reasons for allowance:

The cited prior art taken alone or in combination does not fairly suggest the claimed invention of speculative pre-execution of portions of a computer program in multithreaded and parallel processing environment. Specifically, claims 1, 4 and 9 are directed to executing a program in multithreaded environment and processing subsequent instructions associated with given predefined return values, performed concurrently with processing a first thread and responsive to completion of the processing of function of thread and continue processing of the additional thread associated with return values while terminating at least other additional thread which is not associated with actual return value. Prior art teaches access of mutually resources in multithreaded environment but does not teach processing subsequent instructions associated with given predefined return values, performed concurrently with processing a first thread and responsive to completion of the processing of function of thread and continue processing of the additional thread associated with return values while terminating at least other additional thread which is not associated with actual return value. Therefore, the claimed invention improves on speculative pre-execution processing for multiple instructions and multiple data.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
